

PROJECT TITLE

Crime management system

AIM:-

To design and develop a computerized system that helps in maintaining, tracking, and managing all crime-related information efficiently, accurately, and securely within a police department.

SOLUTIONS:-

1. Online FIR Registration

- ✓ Citizens can file FIRs online.
- ✓ Reduces crowd at police stations.
- ✓ Saves time for both public and police.
- ✓ Allows easy tracking of FIR status.

2. Centralized Crime Database

- ✓ Stores all crime records in one secure system.
- ✓ Police can instantly search criminal history.
- ✓ Helps identify repeat offenders.
- ✓ Reduces paperwork and data loss.

3. Suspect & Criminal Tracking

- ✓ System stores suspect details, photos, fingerprints, and criminal history.
- ✓ Helps officers track movement and activities.
- ✓ Assists in identifying suspects faster.

Matlab Aisa bilkul immediate nahi
soche hain but.. sochenge

➤ EXPLAIN:-

Key Trends and Statistics (2014-2024) Year
Crime Rate (per 100,000 population)
Notes 2014 ~422.2 (for all cognizable
crime) / 3.62 (specific metric unclear) Overall
figure for cognizable crimes was high. 2015 3.35
(specific metric unclear) 2016 3.16 (specific
metric unclear) 2017 3.03 (specific metric
unclear) 2018 383.5 2019 385.5 2020
487.8 A significant rise, partially
attributed to COVID-19 related restrictions and
violations. 2021 445.9 A decline from the 2020
peak. 2022 422.2 Further decline. 2023
448.3 An increase of 7.2% in total cases,
with the rate rising from 422.2 per lakh in
2022. 2024 445.9 (projected/reported early in
year) Remained stable compared to 2021
levels, a marginal drop of 0.56% from the
previous year according to some reports.

RELATIONSHIPS SUMMARY:-

1 → M

Police_Station → Police_Officer

Police_Officer → FIR

FIR → Victim

1 → 1

FIR → Case_File

FIR → Crime_Type (can be 1-M if needed)

M → M

Victim ↔ Criminal (via Victim_Criminal table))

Tables Included:-

- 1> Officer table
- 2> Victim table
- 3> Criminal table
- 4> Police station table
- 5> Crime table
- 6> FIR table
- 7> Case_file table

1> Officer table

```
SQL> CREATE TABLE OFFICER (  
2     Officer_ID INT PRIMARY KEY,  
3     Officer_Name VARCHAR2(50),  
4     Rank VARCHAR2(30),  
5     Station_ID INT,  
6     FOREIGN KEY (Station_ID) REFERENCES POLICE_STATION(Station_ID)  
7 );
```

Table created.

2> VICTIM TABLE

```
SQL> CREATE TABLE VICTIM (  
2     Victim_ID INT PRIMARY KEY,  
3     Victim_Name VARCHAR2(50),  
4     Age INT,  
5     Address VARCHAR2(100),  
6     Registered_By INT,  
7     FOREIGN KEY (Registered_By) REFERENCES OFFICER(Officer_ID)  
8 );
```

Table created.

```
SQL> CREATE TABLE CRIMINAL (  
2     Criminal_ID INT PRIMARY KEY,  
3     Criminal_Name VARCHAR2(50),  
4     Crime_Level VARCHAR2(30),  
5     Arrested_By INT,  
6     FOREIGN KEY (Arrested_By) REFERENCES OFFICER(Officer_ID)  
7 );
```

3> Criminal table

4> police station table

```
SQL> CREATE TABLE POLICE_STATION (  
2     Station_ID INT PRIMARY KEY,  
3     Station_Name VARCHAR2(50),  
4     Location VARCHAR2(50)  
5 );
```

Table created.

5> CRIME TABLE

```
SQL> CREATE TABLE CRIME (  
 2     Crime_ID INT PRIMARY KEY,  
 3     Crime_Type VARCHAR2(50),  
 4     Crime_Date DATE,  
 5     Victim_ID INT,  
 6     Criminal_ID INT,  
 7     Officer_ID INT,  
 8     Station_ID INT,  
 9     FOREIGN KEY (Victim_ID) REFERENCES VICTIM(Victim_ID),  
10     FOREIGN KEY (Criminal_ID) REFERENCES CRIMINAL(Criminal_ID),  
11     FOREIGN KEY (Officer_ID) REFERENCES OFFICER(Officer_ID),  
12     FOREIGN KEY (Station_ID) REFERENCES POLICE_STATION(Station_ID)  
13 );
```

Table created.

6> FIR TABLE

```
SQL> CREATE TABLE FIR (  
2     FIR_ID INT PRIMARY KEY,  
3     Crime_ID INT,  
4     Officer_ID INT,  
5     FIR_Date DATE,  
6     FOREIGN KEY (Crime_ID) REFERENCES CRIME(Crime_ID),  
7     FOREIGN KEY (Officer_ID) REFERENCES OFFICER(Officer_ID)  
8 );
```

Table created.

7> CASE_FILE TABLE

```
SQL> CREATE TABLE CASE_FILE (  
2     Case_ID INT PRIMARY KEY,  
3     FIR_ID INT,  
4     officer_id INT,  
5     Case_Status VARCHAR2(30),  
6     FOREIGN KEY (FIR_ID) REFERENCES FIR(FIR_ID),  
7     FOREIGN KEY (Officer_ID) REFERENCES OFFICER(Officer_ID)  
8 );
```

Table created.

➤ CONCLUSION:-

The Crime Management System is an efficient and user-friendly application designed to help law enforcement agencies manage criminal records, FIRs, and investigation details in a digital format. It reduces paperwork, saves time, and enhances the accuracy of data handling.

By providing centralized access to crime data, the system enables quick retrieval of information, better coordination among departments, and improved decision-making in solving cases. It also strengthens transparency and accountability in police operations.

1) List all crimes with victim and criminal names

```
SQL> SELECT C.Crime_ID, C.Crime_Type, U.Victim_Name, CR.Criminal_Name
2  FROM CRIME C
3  JOIN VICTIM U ON C.Victim_ID = U.Victim_ID
4  JOIN CRIMINAL CR ON C.Criminal_ID = CR.Criminal_ID;
```

CRIME_ID	CRIME_TYPE	VICTIM_NAME	CRIMINAL_NAME
11	Robbery	Rohan	Mahesh
12	Assault	Sneha	Suresh
13	Fraud	Amit	Imran
14	Kidnap	Pooja	Jatin
15	Theft	Rahul	Rakesh

2. Show FIR details with officer and station

```
SQL> SELECT F.FIR_ID, O.Officer_Name, PS.Station_Name
2  FROM FIR F
3  JOIN OFFICER O ON F.Officer_ID = O.Officer_ID
4  JOIN POLICE_STATION PS ON O.Station_ID = PS.Station_ID;
```

FIR_ID	OFFICER_NAME	STATION_NAME
1002	Anil Kumar	Central Station
1001	Raj Singh	Central Station
1003	Pooja Mehra	North Station
1005	Seema Rao	West Station
1004	Arjun Patel	West Station

3. Case status report

```
SQL> SELECT CF.Case_ID, CF.Case_Status, F.FIR_ID, C.Crime_Type
  2   FROM CASE_FILE CF
  3   JOIN FIR F ON CF.FIR_ID = F.FIR_ID
  4   JOIN CRIME C ON F.Crime_ID = C.Crime_ID;
```

CASE_ID	CASE_STATUS	FIR_ID	CRIME_TYPE
501	Open	1001	Robbery
502	Closed	1002	Assault
503	In Court	1003	Fraud
504	Open	1004	Kidnap
505	Under Investigation	1005	Theft

4. Crimes handled by each officer

```
SQL> SELECT Officer_Name, COUNT(Crime_ID) AS Total_Crimes
  2   FROM OFFICER O
  3   LEFT JOIN CRIME C ON O.Officer_ID = C.Officer_ID
  4   GROUP BY Officer_Name;
```

OFFICER_NAME	TOTAL_CRIMES
Anil Kumar	1
Seema Rao	1
Arjun Patel	1
Raj Singh	1
Pooja Mehra	1

5. Criminals arrested by a specific station

```
SQL> SELECT CR.Criminal_Name, PS.Station_Name
  2  FROM CRIMINAL CR
  3  JOIN OFFICER O ON CR.Arrested_By = O.Officer_ID
  4  JOIN POLICE_STATION PS ON O.Station_ID = PS.Station_ID;
```

CRIMINAL_NAME	STATION_NAME
Imran	Central Station
Mahesh	Central Station
Suresh	North Station
Rakesh	West Station
Jatin	West Station
